

This challenge is pretty straightforward:

- Recreate the UI shown in the attached image as accurately as you can.
- Use any flavor of HTML/CSS you like.
- Take up to a day to complete the challenge and deliver the code to us in the manner you find suitable. *We will make a note of the time the code challenge has been sent and start the 24hr clock from there.*
- Assume the latest version of Chrome as your **only** target browser.

We're always learning new things on the design team. If you're looking for ways to show off, focus on these:

- Style the states of interactable elements (be subtle).
- Use BEM naming conventions for your selectors.
- Post your solution on Github (or similar).

Good Luck!
